Date:

Developer:

Source ID:

Short Description:

Feed Provider Technical Contact Information

Name:

Phone:

Email:

All feeds should be delivered as a zip file consistent with current feeds:

(Feeds should include: Installation and configuration information, batch file with scheduling information, consistent use of TNS names for database access, logging mechanism, email notification to netops mailbox, database table(s) used/modified, and simple select statement to verify successful inserts. This should be delivered in a README html document similar to healthscout feed.)

Provide estimate of system resources needed:

(CPU cycles and RAM requirements; storage space requirements for collected data – These items and others should be discussed at the New Feeds Interview with Director - Operations.)

Provide any other relevant information:

(Feed developed against what database? Any special instructions, including error trapping and exception handling, logging and notification?)

Display Layer Dependencies:

Where does the data show up on the site? By what mechanism? Is there a Java bean used?
